# How to set ADFS SSO Connection to Atriis

Overview

This document will detail the process of setting up a Single Sign On with Atriis using ADFS.

Instructions

Follow the below instructions:

1. Client IT team – Need to export Metadata from ADFS
   a. Example can be found in this link: https://docs.keeper.io/sso-connect-guide/identity-provider-setup/ad-fs-configuration
2. Client IT – Need to send over Metadata to Atriis
3. Client IT - Import Atriis Metadata by using this link https://gtp-marketplace.com/identity/wsfed/metadata
4. Client IT - Set WS-Federation Passive Endpoints as https://www.gtp-marketplace.com/identity/abcdef123456

abcdef123456 : Atriis will provide the value to use. Example:
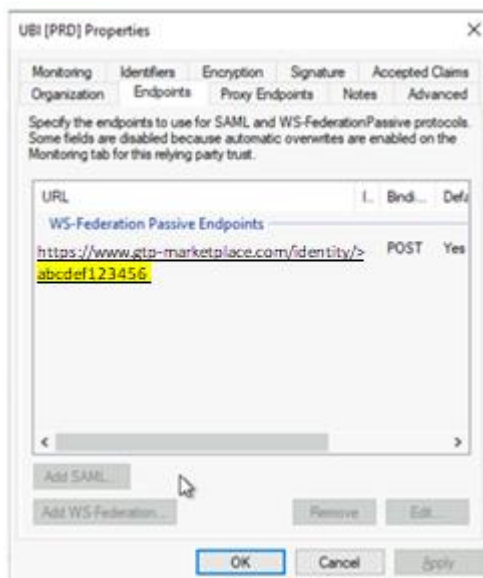

5. Client IT - Make sure they are using SHA-256 as secure hash algorithm
6. Atriis IT – Need to advise the "Secret" and "CompanyID" and send over to Client IT team
7. Client IT - Add two custom rules
   a. 1st rule
      i. Rule Name: Secret
      ii. Rule content set as follows:

      => issue(Type = "https://www.atriis.com/secret", Value = "abcdef123456");

abcdef123456 : Atriis will provide the value to use

Example:

b. 2nd rule
    i. Rule name: CompanyID
    ii. Rule content set as follows:
       => issue(Type= "https://www.atriis.com/companyid", Value = "123456");

123456 : Atriis will provide the value to use

Example:
